

Universal Precautions/OSHA Evaluation “Working Safely in Health-Care Facilities”

True

False

1. You should treat all blood and body substances as if they are infectious.
2. Always recap used needles.
3. Proper use of PPE is important to job safety.
4. Anyone who sees a chemical spill should immediately mop it up.
5. When lifting, keep your back straight, bend your knees and lift with your legs.
6. Adjusting your chair, computer and other equipment can help prevent ergonomic injuries.
7. Medical devices are rarely dangerous, so taking safety precautions with them is not necessary.
8. You should always try to put out a fire while waiting for firefighters to arrive.
9. Only employees who are unsure of their role in an emergency need to take part in disaster drills.
10. You need to report all safety incidents, even ones that did not cause an injury or illness.
